

premec

Continuous fiber intake  
significantly reduces  
the performance  
of the writing instrument.

Not anymore.  
Now there is AFIT.

**afit**

An innovation from the laboratories of Premec in Cadempino, Switzerland

# AFIT. The revolutionary anti-fiber-intake-tip

When paper and tips interact, fibers are taken into the tips and tend to progressively reduce the performance of the system. The innovative Anti-Fiber-Intake-Tip from Premec offers a cost-effective solution to this problem. In combination with Easyfluidal® and Easyfluidal.1® Dokumental Ink, AFIT not only guarantees that no fiber is taken into the tips anymore. It also provides an extremely smooth writing experience with extremely well defined and intense colours and lines until the refill is completely consumed.

A unique performance that translates into significantly more reliable and sustainable products with a longer lifetime and a higher customer satisfaction.

**New AFIT.**  
**For maximum customer satisfaction.**

## Material and sizes

Housing materials	Ball ø (mm)
NS	0.6
NS	0.7
NS	1.0
SS	0.7
SS	1.0
SS	1.4
